

TESTIMONIAL

Massachusetts General Hospital continues to be impressed with the compactors we purchased from SPD Solutions, Inc both the Triple and the Twin Chamber units.

Our management staff is very pleased with the reduction of our FTE and waste cost. Our environmental staff is pleased because there is no lifting required.

We now have over 65 units that have been in service for over 7 years and continue to maintain their excellent working condition today with very little or no service at all.

The key to our success is to contain the waste at the source keeping our rooms and halls clean and orderly and in compliance.

We were just inspected by the Joint Commission and past with flying colors the commission was very impressed with your system saying it was one of the best they have seen.

Massachusetts General Hospital is very satisfied with your product and service support and look forward to a great relationship in the future.
